Energy Usage Dossier

From: Department of Electricity, Government of nuxEland

To: Extradigital Exceptions and Unknowns Network

The Department of Electricity hereby furnishes the enclosed electricity consumption records and associated meter readings for Wenoti Arcade, pursuant to the formal request submitted by Agents Nano and Mega of EXUN. These figures have been compiled from the available metering records and are provided to support the ongoing investigation into the reported anomalies.

Records submitted at the request of _____.

The following observations were noted during data review but have not been established:

1. HVAC startup coincidence: The facility's compressor controller recorded a startup.
2. Elevated harmonic content: The readings are compatible with switching electronics operating under changing load conditions.
3. Minor phase imbalance: A small phase increase was recorded, although no single phase accounts for the total demand excursion.

No substantial thermal excursion was observed at the accessible measurement points during the event. The short duration of the peak may limit the extent to which a thermal response would be apparent at these locations. These findings do not exclude localised heating within inaccessible components. No conclusion can be drawn regarding internal semiconductor temperatures without additional instrumentation.

It is uncompromisable that any relevant discrepancies identified in the accompanying data should be referred and forwarded with expedience to the Department for further verification.

Day	Date (2026)	Meter reading (kWh)	Daily usage (kWh)
1	Oct 13	18,477.20	24.6
2	Oct 14	18,505.30	28.1
3	Oct 15	18,528.20	22.9
4	Oct 16	18,559.60	31.4
5	Oct 17	18,586.30	26.7
6	Oct 18	18,621.50	35.2
7	Oct 19	18,651.30	29.8

Day	Date (2026)	Meter reading (kWh)	Daily usage (kWh)
8	Oct 20	18,674.80	23.5
9	Oct 21	18,702.40	27.6
10	Oct 22	18,727.50	25.1
11	Oct 23	21,411.50	2,684.00
12	Oct 24	21,442.20	503.2
13	Oct 25	21,464.00	21.8
14	Oct 26	21,492.90	28.9
